Chapter 1

Prerequisites

This is a *sample* book written in **Markdown**. You can use anything that Pandoc's Markdown supports, e.g., a math equation $a^2 + b^2 = c^2$.

The **bookdown** package can be installed from CRAN or Github:

```
install.packages("bookdown")
# or the development version
# devtools::install_github("rstudio/bookdown")
```

Remember each Rmd file contains one and only one chapter, and a chapter is defined by the first-level heading `#`.

To compile this example to PDF, you need XeLaTeX. You are recommended to install TinyTeX (which includes XeLaTeX): https://yihui.org/tinytex/.

Chapter 2

Introduction

You can label chapter and section titles using `{#label}` after them, e.g., we can reference Chapter 2. If you do not manually label them, there will be automatic labels anyway, e.g., Chapter 4.

Figures and tables with captions will be placed in `figure` and `table` environments, respectively.

```
par(mar = c(4, 4, .1, .1))
plot(pressure, type = 'b', pch = 19)
```

Reference a figure by its code chunk label with the `fig:` prefix, e.g., see Figure 2.1. Similarly, you can reference tables generated from `knitr::kable()`, e.g., see Table 2.1.

```
knitr::kable(
  head(iris, 20), caption = 'Here is a nice table!',
  booktabs = TRUE
)
```

You can write citations, too. For example, we are using the **bookdown** package (Xie, 2020) in this sample book, which was built on top of R Markdown and **knitr** (Xie, 2015).

Chapter 3

Literature

Here is a review of existing methods.

Chapter 4

Methods

We describe our methods in this chapter.

Chapter 5

Applications

Some *significant* applications are demonstrated in this chapter.

5.1 Example one

5.2 Example two

Chapter 6

Final Words

We have finished a nice book.

First of all, update the Rstudio & R and install the packages to the latest version in order to achieve a perfect result.

6.1 Download the adv_r using git clone and follow the instruction given by the professor and Yihui Xie

I used the "git clone" from Hadley Wickham's Github website to get the book folder (git clone https://github.com/hadley/adv-r.git) to my own personal laptop. Then open the adv-r.Rproj to start. Then, go to the website (https://github.com/rstudio/bookdown-demo) to download the zip file for instruction. Follow the Yihui's steps and instructions on the website (https://bookdown.org/yihui/bookdown/get-started.html)

Then try the document "index.rmd" to find the packages that are still miising by click Build in the menu and follow with the build book button. Or using Knit – Knit to pdf in menu part.

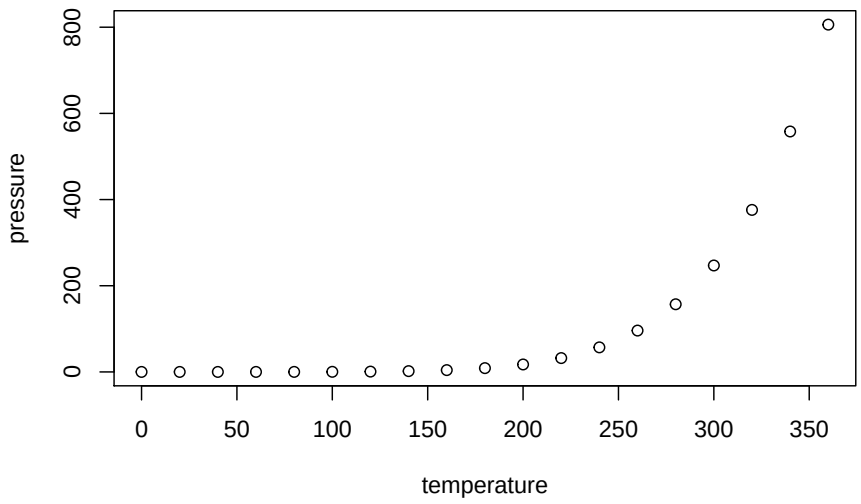
6.2 Packages missing

1. LaTeX failed to compile bookdown-demo.tex
   Solution: install.packages('tinytex) tinytex::install_tinytex()
2.

6.3 Error massages

6.4 Result



Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.
